Training Course on Tuberculosis (TB) Diagnosis, Management, and Control

Training Course on Tuberculosis (TB) Diagnosis, Management, and Control is designed for healthcare professionals, public health workers, and policymakers to enhance their understanding of tuberculosis and its effective management. Despite being a preventable and treatable disease, TB remains a major global health challenge, causing significant morbidity and mortality. This course provides participants with comprehensive knowledge about TB, including its transmission, clinical presentation, diagnostic techniques, and treatment protocols.

Participants will explore the epidemiology of TB, the role of healthcare systems in managing the disease, and strategies for controlling its spread. The course emphasizes the importance of timely diagnosis and effective treatment, including the use of directly observed therapy (DOT) and the management of drug-resistant TB cases. Additionally, it addresses the stigma associated with TB and highlights community engagement as a crucial component of control efforts. Through interactive workshops, case studies, and practical exercises, attendees will develop the skills necessary to implement TB management strategies effectively. By the end of the course, participants will be empowered to contribute to TB control initiatives, improve patient outcomes, and enhance public health responses to this enduring global health threat.
