Advanced Container Closure Integrity Testing (CCIT) Training Course

Introduction

Advanced Container Closure Integrity Testing (CCIT) Training Course is designed to equip pharmaceutical and biotechnology professionals with cutting-edge expertise in Advanced Container Closure Integrity Testing (CCIT). As the industry faces increasingly stringent regulatory compliance, the transition from traditional, subjective methods to modern, deterministic and non-destructive technologies is paramount. This course dives deep into the science, validation, and practical application of advanced CCIT methods, ensuring product sterility assurance and safeguarding patient safety for high-value parenteral products, including biologics and advanced therapy medicinal products (ATMPs). Mastering these advanced techniques, such as High Voltage Leak Detection (HVLD), Laser-Based Headspace Analysis (HSA), and Helium Leak Detection, is crucial for establishing a robust Quality by Design (QbD) approach throughout the entire drug product lifecycle.

This program focuses on providing a holistic CCIT strategy, moving beyond basic leak detection to full method development and validation according to global compendial standards. Participants will gain the critical skills needed to implement 100% in-line inspection, define the Maximum Allowable Leakage Limit (MALL) using a risk-based approach, and effectively troubleshoot complex container-closure systems, including pre-filled syringes, vials, and blow-fill-seal (BFS) containers. By integrating data integrity and automation principles, this training transforms compliance into a competitive advantage, significantly enhancing operational efficiency and quality control in the sterile manufacturing environment

Course Duration

10 days
