Engineering Contracts, Claims Management and Legal Dispute Resolution Training Course

Introduction

Engineering Contracts, Claims Management and Legal Dispute Resolution Training is designed to equip engineers, construction professionals, project managers, contract administrators, quantity surveyors and legal practitioners with advanced knowledge and practical skills in managing complex engineering contracts, contractual obligations, project risks, claims and legal disputes. The course explores the entire engineering contract lifecycle, from contract drafting, tendering, negotiation and award to contract execution, performance monitoring, variation management, claims preparation and final contract closeout. Participants gain an in-depth understanding of internationally recognized contract frameworks, including FIDIC Conditions of Contract, EPC and turnkey contracts, design-build agreements, public-private partnerships (PPPs), subcontracting arrangements and infrastructure project agreements. Emphasis is placed on contractual risk allocation, engineering project governance, legal compliance, contract interpretation, performance obligations, liquidated damages, extension of time (EOT), cost escalation, delay analysis and dispute avoidance strategies.

The programme also provides practical expertise in construction claims management, engineering dispute resolution, contractual negotiations, forensic delay analysis, quantum assessment, arbitration, adjudication, mediation and international construction law. Participants explore how to identify contractual breaches, assess entitlement, prepare substantiated claims, evaluate employer and contractor liabilities, manage variations, resolve payment disputes and protect organizational interests during contentious project situations. Through practical exercises, contract simulations, negotiation workshops and international engineering case studies, delegates develop the confidence to manage disputes efficiently while minimizing litigation costs, project delays and financial exposure. The training integrates contemporary developments in digital contract management, AI-assisted claims analysis, collaborative contracting, infrastructure risk management and alternative dispute resolution (ADR), enabling participants to strengthen contractual performance, improve project delivery and achieve commercially sustainable engineering outcomes.

Course Duration

10 days

Course Objectives

By the end of this course, participants will be able to:

- Understand advanced engineering contract law, contractual principles and internationally recognized construction contract frameworks.
- Interpret and apply FIDIC Conditions of Contract, EPC agreements and international infrastructure contract provisions.
- Develop effective contract drafting, negotiation and contract administration strategies.
- Identify, assess and allocate engineering project contractual risks and liabilities.
- Apply advanced construction claims management principles and procedures.
- Prepare, substantiate and evaluate extension of time (EOT) and delay claims.
- Conduct forensic delay analysis, critical path assessment and project schedule evaluation.
- Manage variation orders, change management and contractual compensation events.
- Assess financial exposure through quantum analysis, loss and expense claims and damages assessment.
- Apply effective contract dispute avoidance and early resolution mechanisms.
- Understand international construction arbitration, adjudication and mediation procedures.
- Strengthen legal compliance, contractual documentation and engineering project governance.
- Develop strategic approaches to commercial dispute resolution, litigation risk management and contractual recovery.

Target Audience

- Civil, mechanical, electrical and structural engineers involved in engineering and infrastructure projects.

- Project managers, programme managers and engineering project directors.
- Contract managers, contract administrators and procurement professionals.
- Quantity surveyors, cost engineers and commercial managers.
- Construction lawyers, legal advisers and corporate legal officers.
- Claims consultants, delay analysts and dispute resolution specialists.
- Government officials, infrastructure regulators and public procurement professionals.
- Contractors, engineering consultants, developers and project finance professionals.

Course Modules

Module 1: Fundamentals of Engineering Contracts and Contract Law

- Principles and legal foundations of engineering contracts.
- Essential elements of valid and enforceable contracts.
- Contract formation, offer, acceptance and consideration.
- Contractual obligations, warranties and performance requirements.
- Breach of contract, remedies and legal consequences.
- Case Study: Examination of an engineering construction contract dispute involving alleged breach of contractual obligations and failure to meet project specifications.

Module 2: International Engineering Contract Frameworks and FIDIC Conditions

- Introduction to international engineering contract standards.
- Understanding FIDIC Red, Yellow and Silver Books.
- Employer, engineer and contractor responsibilities.
- Particular Conditions and General Conditions of Contract.
- Application of FIDIC provisions in international infrastructure projects.
- Case Study: Analysis of a major infrastructure project where conflicting interpretations of FIDIC contractual provisions resulted in a contractor-employer dispute.

Module 3: Engineering Contract Drafting, Negotiation and Review

- Principles of effective engineering contract drafting.
- Defining project scope, specifications and deliverables.
- Contract negotiation strategies and commercial considerations.
- Drafting payment, indemnity and liability provisions.
- Reviewing contractual clauses for legal and commercial risks.
- Case Study: Review and negotiation of an EPC contract involving ambiguous technical specifications, unclear deliverables and disputed payment obligations.

Module 4: Contract Administration and Performance Management

- Establishing effective contract administration systems.
- Monitoring contractual milestones and performance obligations.
- Managing notices, instructions and contractual correspondence.
- Contract documentation and record-keeping requirements.
- Managing contractor and subcontractor performance.
- Case Study: Examination of an infrastructure project experiencing contractual administration failures, delayed instructions and disputes over performance obligations.

Module 5: Contractual Risk Allocation and Liability Management

- Identifying engineering and construction contractual risks.
- Risk allocation between employers, contractors and consultants.
- Managing force majeure and exceptional events.
- Understanding indemnities, insurance and liability limitations.
- Evaluating consequential loss and liability exposure.
- Case Study: Analysis of a power infrastructure project affected by unforeseen ground conditions, material price escalation and contractor liability claims.

Module 6: Construction Claims Identification and Management

• Introduction to construction claims and entitlement.

• Identifying contractual and non-contractual claims.

• Understanding notice requirements and claim procedures.

• Preparing claims registers and supporting documentation.

• Developing effective claims assessment and response strategies.

• Case Study: A contractor submits additional payment claims following unexpected project disruptions, requiring assessment of contractual entitlement and supporting evidence.

Module 7: Extension of Time (EOT) and Construction Delay Claims

• Understanding contractual entitlement to extensions of time.

• Identifying employer-caused and contractor-caused delays.

• Preparing and evaluating EOT applications.

• Assessing concurrent delays and critical path impacts.

• Managing liquidated damages and delay-related liabilities.

• Case Study: Assessment of an EOT claim involving delayed site possession, late design approvals and contractor scheduling problems on a highway construction project.

Module 8: Forensic Delay Analysis and Project Scheduling Disputes

• Fundamentals of forensic delay analysis.

• Critical Path Method (CPM) and schedule impact analysis.

• Time Impact Analysis and windows analysis.

• Evaluating baseline schedules and progress updates.

• Preparing expert delay analysis reports.

• Case Study: Investigation of a delayed commercial infrastructure project using forensic schedule analysis to establish responsibility for project overruns.

Module 9: Variations, Change Orders and Scope Management

• Understanding contractual variations and change provisions.

• Managing employer instructions and scope modifications.

• Valuation of variations and additional works.

• Assessing time and cost implications of changes.

• Preventing unauthorized variations and scope creep.

• Case Study: A contractor disputes additional work instructions issued during a water infrastructure project and seeks compensation for unapproved variations.

Module 10: Quantum Analysis, Cost Claims and Financial Compensation

• Principles of construction quantum assessment.

• Evaluating loss and expense claims.

• Assessing prolongation costs and disruption claims.

• Calculating damages, compensation and additional costs.

• Reviewing financial evidence and supporting cost documentation.

• Case Study: Assessment of a contractor's prolongation and disruption claims arising from extended project duration and increased equipment, labour and overhead costs.

Module 11: Contractual Breaches, Termination and Legal Remedies

• Identifying material and fundamental contractual breaches.

• Understanding contractual default and termination clauses.

• Managing suspension, termination and contract abandonment.

• Evaluating liquidated damages and other legal remedies.

• Managing contractual consequences of insolvency and non-performance.

• Case Study: Analysis of a terminated engineering contract following persistent contractor underperformance, disputed payment certificates and failure to achieve milestones.

Module 12: Engineering Dispute Avoidance and Alternative Dispute Resolution

• Understanding dispute avoidance and early intervention.

- Negotiation techniques for engineering disputes.
- Mediation procedures and settlement strategies.
- Adjudication and dispute avoidance/adjudication boards.
- Developing collaborative dispute resolution frameworks.
- Case Study: Resolution of a contractor-employer payment dispute through mediation and structured negotiation without resorting to lengthy litigation.

Module 13: Construction Arbitration and International Dispute Resolution

- Fundamentals of domestic and international arbitration.
- Understanding arbitration agreements and jurisdiction.
- Arbitration procedures and institutional frameworks.
- Appointment and responsibilities of arbitrators.
- Arbitration awards, enforcement and challenges.
- Case Study: Examination of an international EPC infrastructure dispute involving disputed variations, delay damages and arbitration proceedings.

Module 14: Engineering Litigation, Evidence and Expert Witness Management

- Understanding litigation procedures in engineering disputes.
- Collecting and preserving contractual and technical evidence.
- Managing electronic correspondence and project records.
- Preparing expert witness reports and technical opinions.
- Cross-examination and presentation of engineering evidence.
- Case Study: Analysis of a construction litigation matter involving defective engineering works, competing expert reports and disputed technical evidence.

Module 15: Advanced Contract Governance, Digital Claims Management and Dispute Prevention

- Implementing effective contract governance frameworks.
- Digital contract lifecycle management and document control.
- Applying AI-assisted claims analysis and risk identification.
- Integrating BIM, project controls and contractual reporting.
- Developing proactive dispute prevention and resolution strategies.
- Case Study: Evaluation of a large infrastructure development programme using digital contract management, integrated project controls and early warning systems to reduce claims exposure and prevent disputes.

Training Methodology

- Interactive lectures and presentations.
- Group discussions and brainstorming sessions.
- Hands-on exercises using real-world datasets.
- Role-playing and scenario-based simulations.
- Analysis of case studies to bridge theory and practice.
- Peer-to-peer learning and networking.
- Expert-led Q&A sessions.
- Continuous feedback and personalized guidance.

Certification

Upon successful completion of this training, participants will be issued with a globally- recognized certificate.

Tailor-Made Course

We also offer tailor-made courses based on your needs.

Key Notes

a. The participant must be conversant with English.

b. Upon completion of training the participant will be issued with an Authorized Training Certificate

c. Course duration is flexible and the contents can be modified to fit any number of days.

d. The course fee includes facilitation training materials, 2 coffee breaks, buffet lunch and A Certificate upon successful completion of Training.

e. One-year post-training support Consultation and Coaching provided after the course.

f. Payment should be done at least a week before commence of the training, to DATASTAT CONSULTANCY LTD account, as indicated in the invoice so as to enable us prepare better for you.

Certification & Learning Methodology

- Hands-on practical delivery with real-world datasets, case studies, and lab exercises.
- Post-training mentorship, access to class resources, and customized follow-up support.
- Participants who successfully complete the course receive an accredited Datastat Certificate of Completion.
