Advanced Stability Protocols for Investigational Products Training Course

Introduction

Advanced Stability Protocols for Investigational Products Training Course is designed to transition stability professionals from ICH-compliant stability testing to strategic, risk-based stability management for complex Investigational Products. The pharmaceutical landscape, especially in biologics, Advanced Therapy Medicinal Products, and combination products, demands more than just rote protocol execution. We emphasize Quality by Design principles, accelerated predictive modeling like Accelerated Stability Assessment Program, and rigorous cold chain management for clinical supply chain resilience. By mastering advanced statistical data analysis and stability-indicating methods validation, participants will gain the expertise required to design phase-appropriate stability programs that minimize clinical hold risk, justify extended shelf-life for global trials, and secure optimal regulatory submission outcomes. This training transforms stability science into a strategic asset for modern drug development.

The program directly addresses the critical industry need for expertise in handling novel modalities and navigating complex global regulations. Delegates will acquire actionable knowledge in Quality Risk Management to anticipate and mitigate stability challenges, such as Out-of-Specification investigations and temperature excursion management. From the design of forced degradation studies to the technical writing of the Chemistry, Manufacturing, and Controls stability section for IND/IMPD filings, this course provides a comprehensive toolkit. Ultimately, successful completion ensures a profound understanding of how to establish a robust, compliant, and cost-efficient stability program that accelerates Time-to-Market while safeguarding patient safety and product quality throughout the entire product lifecycle.
