Advanced Urban Data Analytics Training Course

Introduction

Advanced Urban Data Analytics Training Course provides a comprehensive and practical foundation for applying urban data science, geospatial analytics, artificial intelligence, machine learning, and predictive modelling to complex urban planning and development challenges. The course explores how cities can transform big data from geographic information systems (GIS), Internet of Things (IoT) sensors, satellite imagery, mobility platforms, demographic databases, infrastructure systems, and open-data portals into actionable urban intelligence. Participants will develop advanced capabilities in spatial data analysis, urban visualization, data-driven planning, smart city analytics, urban forecasting, and evidence-based decision-making.

The training emphasizes emerging technologies and data-driven approaches for understanding urban growth, land-use change, transportation patterns, environmental conditions, infrastructure demand, housing dynamics, and public-service accessibility. Through practical exercises and international case studies, participants will learn to integrate Python, R, GIS, remote sensing, dashboards, and artificial intelligence into urban analytics workflows. The course supports professionals seeking to strengthen urban resilience, sustainable development, digital transformation, smart city planning, and data-informed policy development across rapidly changing urban environments.
