Gas Condensate Flow Assurance Training Course

Introduction

Gas Condensate Flow Assurance Training Course is designed to equip oil and gas professionals with advanced knowledge and practical skills for managing complex multiphase flow challenges in gas condensate production systems. As gas condensate reservoirs experience changing pressure, temperature, and fluid composition throughout their production life cycle, maintaining stable hydrocarbon flow becomes increasingly important for operational efficiency, production optimization, and asset integrity. Participants will learn how to identify flow restrictions, evaluate liquid accumulation risks, interpret pressure-temperature relationships, and apply advanced flow assurance techniques to improve production performance across wells, gathering networks, pipelines, and processing facilities. The program also examines the application of thermodynamic models, equation-of-state calculations, compositional simulation, and digital flow assurance technologies to support reliable production forecasting and engineering decision-making.

The course highlights the integration of real-time production monitoring, predictive analytics, digital twins, production data analytics, and asset integrity management to support proactive operational control and maximize hydrocarbon recovery. Participants will also examine strategies for optimizing gas velocity, managing liquid holdup, improving pipeline restart procedures, and minimizing unplanned shutdowns. By combining reservoir engineering, production technology, pipeline engineering, and process operations, this course enables professionals to develop cost-effective and technically sound solutions that enhance gas condensate recovery, strengthen flow reliability, improve operational safety, and support long-term oil and gas asset performance.

Course Duration

5 days
