Geological Carbon Storage Characterization Training Course

Introduction

Geological Carbon Storage Characterization Training Course is designed to equip professionals with advanced technical knowledge and practical skills for evaluating, characterizing, and managing geological formations suitable for lo Participants will learn how to identify suitable storage sites in deep saline aquifers, depleted oil and gas reservoirs, and other potential geological formations using 3D seismic interpretation, well log analysis, reservoir modelling, geological mapping, and subsurface data integration. The course emphasizes the application of modern characterization techniques to assess storage capacity, injectivity, containment security, and long-term storage feasibility.

The program examines CO, plume migration, pressure management, fault reactivation risks, reserv and induced seismicity to strengthen understanding of geological storage performance and environmental protection. Participants will also explore emerging technologies such as artificial intelligence (AI) in subsurface characterization, digital geological models, advanced simulation workflows, and data-driven storage site screening. The training highlights the importance of regulatory compliance, risk assessment, monitoring, verification and accounting (MRV), and Measurement, Monitoring and Verification (MMV) strategies throughout the carbon storage lifecycle. By the end of the course, participants will be better equipped to contribute to geological storage site selection, feasibility studies, storage resource estimation, project development, and long-term containment planning, supporting the development of safe, sustainable, and commercially viable carbon management and climate technology solutions.
