Geostatistical Reservoir Modeling Training Course

Introduction

Geostatistical Reservoir Modeling Training Course designed to equip oil and gas professionals with advanced knowledge and practical skills in geostatistics, reservoir characterization, spatial data analysis, stochastic modeling, and 3D geological reservoir modeling. Participants will learn how to integrate heterogeneous subsurface datasets, quantify spatial variability, characterize reservoir heterogeneity, and generate realistic representations of porosity, permeability, facies distribution, and other critical reservoir properties. The training emphasizes industry-relevant applications, modern reservoir modeling workflows, uncertainty quantification, and best practices for building robust geological models that support exploration, field development planning, and production optimization.

Participants will explore geostatistical algorithms such as kriging, sequential Gaussian simulation, sequential indicator simulation, and object-based modeling, alongside methods for validating geological models against well data and geological interpretations. Practical sessions and industry-based case studies will demonstrate how geostatistical workflows can improve reservoir connectivity analysis, identify sweet spots, evaluate hydrocarbon distribution, and support history matching and reservoir simulationBy the end of the training, participants will be better equipped to develop defensible reservoir models, evaluate alternative geological scenarios, communicate uncertainty to multidisciplinary teams, and apply modern geostatistical techniques to enhance reservoir management, field development strategies, recovery efficiency, and economic value creation across the upstream oil and gas industry.
