Methane Emissions Detection and Quantification Training Course

Introduction

Methane Emissions Detection and Quantification Training Course is designed to equip participants with the technical expertise, practical skills, and analytical tools required to identify, measure, quantify, monitor, and mitigate methane emissions across the oil and gas industry, energy infrastructure, industrial facilities, waste management operations, and other methane-intensive sectors. This training course explores advanced methane detection technologies, including optical gas imaging (OGI), infrared cameras, laser-based detection, fixed methane sensors, satellite-based monitoring, aerial surveys, drones, and continuous emissions monitoring systems (CEMS). Participants will develop a comprehensive understanding of methane sources, leak detection and repair (LDAR) programmes, emissions measurement methodologies, uncertainty analysis, and data-driven approaches to methane management.

Through technical exercises, industry case studies, and scenario-based learning, delegates will explore methane emissions from production facilities, pipelines, compressor stations, storage tanks, processing plants, landfills, and wastewater treatment systems. The programme addresses internationally recognized measurement and reporting frameworks, including the Oil and Gas Methane Partnership 2.0 (OGMP 2.0), relevant greenhouse gas accounting principles, and applicable regulatory requirements. By the end of the training, participants will be better prepared to implement robust methane management systems, improve emissions transparency, support credible climate reporting, reduce product losses, and contribute to low-carbon operations, operational excellence, and sustainable energy development.

Course Duration

5 days
