Naturally Fractured Reservoir Engineering Training Course

Introduction

Naturally Fractured Reservoir Engineering Training Course is designed to equip oil and gas professionals with advanced knowledge and practical skills in naturally fractured reservoir characterization, fracture network modeling, reservoir simulation, fluid flow analysis, and hydrocarbon recovery optimization. This course explores the fundamental principles of dual-porosity and dual-permeability modeling, discrete fracture network (DFN) simulation, petrophysical evaluation, geomechanical analysis, and pressure transient interpretation to help participants understand and manage complex fractured formations. Through industry-relevant methodologies and modern reservoir engineering workflows, participants will learn to evaluate fracture intensity, estimate effective permeability, assess reservoir connectivity, and integrate geological, geophysical, petrophysical, and production data into reliable reservoir models.

Participants will examine the impact of fracture conductivity, capillary pressure, gravity drainage, fluid exchange between matrix blocks and fractures, and stress-sensitive fracture permeability on long-term reservoir performance. Practical exercises and real-world case studies will demonstrate how engineers can improve reservoir performance prediction, recovery factor estimation, well productivity, field development planning, and hydrocarbon recovery efficiency while managing subsurface uncertainties. By combining established reservoir engineering principles with emerging digital technologies, integrated modeling techniques, and production surveillance strategies, this training course prepares professionals to make evidence-based decisions, reduce development risks, optimize field economics, and maximize the value of naturally fractured reservoirs throughout their productive life cycle.

Course Duration

5 days
