Physics-Informed AI for Petroleum Engineering Training Course

Introduction

Physics-Informed AI for Petroleum Engineering Training Course is designed to equip petroleum engineers, data scientists, reservoir specialists, and energy professionals with advanced skills in integrating artificial intelligence (AI), machine learning (ML), physics-informed neural networks (PINNs), computational modeling, and petroleum engineering principles. This specialized training course explores how physics-informed machine learning combines governing physical laws, mathematical equations, geological knowledge, and operational data to solve complex petroleum engineering challenges. Participants will learn how to apply deep learning, scientific machine learning, reservoir simulation, fluid flow modeling, digital twins, and predictive analytics to subsurface characterization, reservoir performance forecasting, well optimization, and production engineering. The course emphasizes the practical integration of physical principles, including conservation of mass, momentum, and energy, into AI models to improve their consistency, interpretability, and generalization when working with limited, noisy, or incomplete field data.

The program covers reservoir pressure prediction, multiphase flow simulation, production optimization, history matching, well performance analysis, reservoir parameter estimation, uncertainty quantification, and intelligent decision support. Participants will explore how physics-informed neural networks can complement conventional numerical simulators, accelerate computationally intensive workflows, and improve understanding of complex subsurface systems. Additional emphasis is placed on model validation, data quality, computational efficiency, explainable AI, and the responsible implementation of AI technologies in operational environments. By the end of the course, participants will be better positioned to develop hybrid physics- and data-driven models, evaluate emerging AI technologies, and translate scientific machine learning innovations into measurable improvements in petroleum recovery, production efficiency, reservoir management, and long-term asset value.
