Polymer Flooding Design and Optimization Training Course

Introduction

Polymer Flooding Design and Optimization Training Course is designed to equip petroleum engineers, reservoir engineers, production specialists, and enhanced oil recovery (EOR) professionals with advanced technical skills for improving oil recovery from conventional and mature oil reservoirs. This course explores the fundamental principles of polymer injection, reservoir characterization, polymer rheology, fluid–fluid interactions, mobility control, reservoir simulation, injectivity management, and recovery factor optimization. Participants will develop a practical understanding of how polymer solutions improve waterflood performance by increasing the viscosity of injected water, reducing water mobility, improving sweep efficiency, and diverting injected fluids toward previously unswept reservoir zones. The programme also examines polymer selection, concentration design, salinity compatibility, temperature effects, adsorption, mechanical degradation, and reservoir heterogeneity to support technically sound and economically viable polymer flooding projects.

The training emphasizes data-driven EOR optimization, digital reservoir engineering, predictive modelling, uncertainty analysis, and lifecycle performance management to help organizations design reliable polymer flooding strategies for challenging reservoir conditions. Participants will learn how to integrate laboratory measurements, core flooding experiments, pressure transient data, production history, and numerical reservoir simulation into effective field development decisions. Practical exercises and industry-based case studies will cover polymer slug sizing, injection rate optimization, well pattern selection, pressure management, produced water handling, and economic evaluation of alternative development scenarios. The course also addresses operational challenges such as polymer retention, injectivity loss, formation damage, shear sensitivity, equipment compatibility, and polymer supply costs. By the end of the programme, participants will be better prepared to evaluate polymer flooding feasibility, optimize injection strategies, improve volumetric sweep, reduce premature water breakthrough, and develop cost-effective, sustainable, and commercially attractive enhanced oil recovery projects that support long-term petroleum asset value creation.

Course Duration
