Probabilistic Reservoir Modeling and Forecasting Training Course

Introduction

Probabilistic Reservoir Modeling and Forecasting Training Course is designed to equip oil and gas professionals with advanced technical knowledge and practical skills in reservoir uncertainty quantification, probabilistic modeling, production forecasting, reservoir simulation, and data-driven decision-making. This course explores the principles and applications of probabilistic reservoir characterization, geological uncertainty analysis, stochastic simulation, Bayesian inference, Monte Carlo simulation, and ensemble-based reservoir modeling. Participants will learn how to integrate geological, geophysical, petrophysical, and production data to develop reliable reservoir models that account for uncertainty in porosity, permeability, fluid properties, reservoir connectivity, and hydrocarbon volumes. Emphasis is placed on advanced reservoir simulation, uncertainty propagation, history matching, predictive analytics, and probabilistic production forecasting to support technically sound and commercially viable petroleum projects.

Participants will explore techniques for generating P10, P50, and P90 forecasts, evaluating alternative reservoir scenarios, quantifying forecast confidence, and assessing the impact of geological and operational uncertainties on long-term production performance. Through practical exercises, industry-based case studies, and reservoir forecasting simulations, learners will develop the ability to interpret probabilistic results, communicate uncertainty to multidisciplinary teams, and support investment decisions using risk-adjusted production scenarios. The program integrates modern approaches such as ensemble modeling, machine learning for reservoir forecasting, data assimilation, sensitivity analysis, and uncertainty-aware digital workflows. By the end of the course, participants will be better prepared to develop robust reservoir forecasts, reduce subsurface decision risk, improve recovery strategies, and maximize the technical and economic value of petroleum assets in increasingly complex exploration and production environments.
