Reservoir Simulation and History Matching Training Course

Introduction

Reservoir Simulation and History Matching Training Course is designed to equip oil and gas professionals with advanced technical knowledge and practical skills for building, calibrating, validating, and optimizing reservoir simulation models. This comprehensive training course explores the fundamentals of reservoir engineering, geological modeling, fluid properties, numerical simulation, production data analysis, and history matching techniques used to align simulated reservoir behavior with actual field performance. Participants will gain practical insights into reservoir characterization, pressure and saturation distribution, relative permeability, PVT modeling, aquifer behavior, well performance, and the impact of uncertainty on production forecasts. The course also introduces modern reservoir modeling workflows, assisted history matching, sensitivity analysis, and optimization methods that help improve model reliability and operational decision-making.

Participants will learn how to identify mismatches between historical production data and simulated results, diagnose the underlying causes, adjust model parameters systematically, and validate simulation models without compromising geological realism. Through practical exercises, technical workshops, and industry-based case studies, learners will explore waterflood simulation, pressure depletion, gas injection, enhanced oil recovery (EOR), and mature-field optimization. The training also covers uncertainty quantification, ensemble-based history matching, proxy modeling, and emerging applications of artificial intelligence and machine learning in reservoir simulation workflows. By the end of the course, participants will be better prepared to develop robust reservoir models, improve production forecasts, evaluate alternative development scenarios, and support data-driven reservoir management, field development planning, and long-term hydrocarbon recovery optimization.

Course Duration
