Training Course on Circular Bioeconomy Models in Agricultural Systems

Introduction

In the face of climate change, resource scarcity, and rising environmental concerns, circular bioeconomy models in agricultural systems are emerging as transformative solutions. These models leverage sustainable practices, biological resources, and circular economy principles to reduce waste, optimize resource use, and boost agricultural productivity. Training Course on Circular Bioeconomy Models in Agricultural Systems is tailored to empower professionals and stakeholders with innovative tools, systems thinking, and regenerative techniques that align agricultural practices with green growth and sustainable development goals (SDGs).

By integrating renewable biological resources into value chains, circular bioeconomy models enhance environmental resilience, rural development, and food security. This course provides a multi-disciplinary approach that combines circular design, regenerative agriculture, biotechnology, and digital innovations. Participants will gain practical knowledge on designing circular systems, implementing biowaste valorization techniques, and driving socio-economic growth through sustainable bio-based business models.
