Training Course on Designing and Managing Linked Data Projects in Libraries

Introduction

The landscape of information organization and discovery is rapidly evolving, driven by the emergence of Linked Data and Semantic Web technologies. Libraries, as custodians of vast and diverse knowledge, are at the forefront of this transformation. Traditional bibliographic data, often confined within siloed systems, limits the discoverability and interconnectedness of library resources. This course addresses the critical need for library professionals to master the principles, tools, and methodologies required to design, implement, and manage Linked Data projects, thereby unlocking the full potential of their collections in the global knowledge graph. Embracing Linked Data empowers libraries to enhance resource discoverability, foster data interoperability, and establish themselves as central nodes in the digital information ecosystem.
