Training Course on Electricity Market Design and Operation for Engineers

Introduction

In the rapidly evolving energy landscape, understanding the design and operation of electricity markets is essential for engineers, regulators, and stakeholders. As the world transitions toward renewable integration, smart grids, and decentralized generation, electricity markets must evolve to remain efficient, reliable, and fair. Training Course on Electricity Market Design and Operation for Engineers equips engineers with in-depth knowledge of market structures, pricing mechanisms, grid reliability, and regulatory frameworks that underpin both traditional and modern power markets.

Participants will explore critical topics including wholesale and retail market operations, day-ahead and real-time markets, capacity and ancillary services markets, and transmission congestion management. Through hands-on simulations, real-world case studies, and interactive tools, engineers will gain practical skills to navigate dynamic electricity markets while supporting grid decarbonization, demand response, and energy trading innovations.
