Training Course on Power Quality Analysis and Mitigation Techniques

Introduction

With the increasing complexity of modern power systems and the integration of renewable energy, electric vehicles, and sensitive electronic loads, power quality (PQ) has emerged as a critical aspect of electrical engineering and grid reliability. Training Course on Power Quality Analysis and Mitigation Techniques offers a comprehensive understanding of power quality disturbances, their causes, impacts, and practical mitigation techniques. From voltage sags, harmonics, and flicker, to transients and power factor issues, participants will gain essential skills in identifying, analyzing, and resolving power quality problems in both utility and industrial environments.

Designed for engineers, energy managers, and utility professionals, the course leverages real-world case studies, power quality monitoring tools, and simulation-based techniques to address challenges posed by non-linear loads, distributed generation, and automation systems. Participants will also explore standards such as IEEE 519, IEC 61000, and apply solutions like active filters, UPS systems, dynamic voltage restorers, and reactive power compensation. The program is ideal for anyone seeking to ensure grid compliance, equipment reliability, and energy efficiency in modern electrical systems.
